

MVP Specification: Cinematic Studio Website

1. MVP Definition

The Minimum Viable Product (MVP) is a single, continuous scrolling page application that effectively showcases our identity, core services, and a minimal, high-impact selection of our best work. It must be a functional, visually stunning demo that allows prospects to quickly understand our offering and initiate contact.

2. Core Feature Set (MVP Scope IN)

Section Name	Required Elements	Notes
Header /Navigation	Logo, minimal links (Home, Portfolio, Contact), Mobile Hamburger Menu (Shadcn Sheet).	Sticky navigation that changes style (e.g., shrinks) on scroll.
Hero Section	Full-width, high-quality video or image with a simple, powerful headline and a Call-to-Action (CTA): "Start Your Story".	Video must be muted and loop gently. Must have a clear, high-contrast headline.
Featured Services	Short, high-level summary of the 3 main service pillars (Pre-Production, Production, Post-Production).	Use Cards (Shadcn) with icons/emojis and 1-2 sentences each.
Featured Portfolio	A dedicated, responsive grid of the 3 best case studies/videos.	Grid items should show a thumbnail and video title. Clicking should open a Modal/Dialog (Shadcn) containing the embedded video and a brief description.
Contact Form	Simple, secure inquiry form (Name, Email, Message).	Must include basic form validation. The submission button should use Shadcn's button component with a loading state.
Footer	Copyright, Studio Address, Social Media Links (minimal icons).	

3. Exclusions (MVP Scope OUT)

The following features are explicitly **out of scope** for the initial MVP launch:

- Dedicated Blog or News section.
- Complex animations (e.g., Lottie files, 3D effects).
- Multi-language support (English only).
- Integration with a CMS (content will be hardcoded in the initial React components).
- Detailed team bios or "Careers" page.
- Advanced filtering/search functionality on the Portfolio page (simple grid only).

4. Performance & Accessibility Acceptance Criteria

- **Responsiveness:** Perfect display and usability on iPhone SE (320px width) up to 4K monitors. No horizontal scrolling.
- **Aesthetics:** Dark theme, use of `Inter` font, subtle color grading, and smooth scrolling effects.
- **WCAG 2.1 AA:** Passing scores on automated accessibility checkers (e.g., axe-core) and manual checks for keyboard navigation.
