

Product Requirements Document: Cinematic Studio Website

1. Introduction

1.1 Project Goal

To create a modern, high-performance, and visually cinematic website that serves as the primary digital showcase for our professional videography and post-production studio. The site must effectively communicate our core value—storytelling through visual media—and serve as a lead-generation tool by featuring our end-to-end service capabilities and high-quality portfolio.

1.2 Vision

To be recognized as the premier destination for clients seeking world-class cinematic production and post-production services, evidenced by a website that is an aesthetic masterpiece and a seamless user experience.

2. Target Audience

- **Marketing/Brand Managers:** Clients looking for commercials, corporate videos, or brand storytelling. (Need clear pricing/contact info).
- **Musicians/Labels:** Clients needing high-quality, creative music videos. (Need powerful, visual portfolio).
- **Producers/Filmmakers:** Clients seeking specialized post-production services (color, sound design). (Need detailed service descriptions).
- **Event Organizers:** Clients needing professional event highlights and cinematic recaps.

3. High-Level Goals

ID	Type	Goal Description	Success Metric
G-1	Business	Increase qualified lead inquiries.	15% increase in Contact Form submissions within 3 months.
G-2	Product	Establish visual credibility and professionalism.	Average time on site > 2:00 minutes.
G-3	Technical	Ensure high performance and modern standards.	Lighthouse Score (Performance, Accessibility) > 90 on mobile and desktop.

4. Feature Requirements

4.1 Core Pages (MVP)

Page	Description	Key Content/Interaction
------	-------------	-------------------------

Home (Landing)	High-impact, cinematic visual introduction.	Full-width video header (non-intrusive auto-play or hero image with play button), main service overview, featured portfolio carousel.
Portfolio	Central hub for case studies and finished work.	Filterable/searchable gallery by project type (Commercials, Music Videos, Short Films). Each project opens to a dedicated detail view.
Services	Detailed breakdown of end-to-end offering.	Three main sections: Pre-Production (Concept, Scripting), Production (Cinematography, Crew), Post-Production (Editing, Color, Sound).
About Us	Introduces the team and our philosophy (storytelling focus).	Team photo/bio, studio philosophy, core values.
Contact	Simple, clear way to initiate a project.	Inquiry form, email address, phone number, location (map/address).

4.2 Key Visual/Interaction Requirements

- **Cinematic Feel:** Use dark, high-contrast color palettes (black, deep gray, white, and a signature accent color). Leverage smooth transitions and minimal, elegant motion (parallax, subtle hover effects).
- **Micro-Interactions:** Subtle use of Shadcn/Tailwind components (e.g., button loaders, minimal modal designs, scroll indicators).
- **Media Handling:** All videos must use optimized embedded players (e.g., Vimeo/YouTube) and load asynchronously. Placeholder images must be high quality.

5. Technical Specifications

5.1 Technology Stack (Mandatory)

- **Frontend Framework:** React (Functional Components + Hooks)
- **Language:** TypeScript
- **Styling:** Tailwind CSS (utility-first approach)
- **UI Components:** Shadcn/ui (for accessible and polished components like Dialog, Card, Button).
- **Architecture:** Single-page application structure.

5.2 Responsive Design & Performance (MCP Focus)

- **Mobile-First Approach (MCP):** All styling and layout decisions must prioritize the mobile viewport first, using Tailwind's responsive prefixes (`sm:` , `md:` , `lg:`) to scale up for larger devices.
- **Performance:** Optimize image and video loading. Implement lazy loading for media assets below the fold.
- **Fluid Layouts:** Avoid fixed widths; use `vw` , `%` , and Tailwind's fluid spacing utilities.

5.3 Accessibility (WCAG 2.1 Conformance)

- **Standard:** Must conform to WCAG 2.1 Level AA.
- **Keyboard Navigation:** All interactive elements (links, buttons, navigation) must be fully navigable and operable using only a keyboard.
- **Color Contrast:** Ensure a minimum contrast ratio of 4.5:1 for all text and necessary images (especially critical given the dark theme).
- **ARIA Attributes:** Utilize ARIA roles, states, and properties appropriately, especially when using custom Shadcn components.
- **Semantic HTML:** Use appropriate HTML5 tags (`<nav>` , `<header>` , `<footer>` , `<main>` , etc.) for structure.
- **Focus Indication:** Maintain clear and visible focus states (`ring-2` , `ring-offset-2`) for all
